

# Graph Theory

## Homework assignment #1

Due date: Sunday, November 19, 2017

**Problem 1.** Prove that for each  $n \geq 1$ , the number of graphs with vertex set  $\{1, \dots, n\}$  and all degrees even is  $2^{\binom{n-1}{2}}$ .

**Problem 2.** Suppose that  $n \geq 8$ . Prove that every  $n$ -vertex graph with at least  $6n - 20$  edges contains a subgraph with minimum degree at least 7.

**Problem 3.** Prove that every graph  $G$  with  $m$  edges admits a bipartition  $V(G) = V_1 \cup V_2$  such that the number of edges of  $G$  crossing between  $V_1$  and  $V_2$  is at least  $m/2$ .

**Problem 4.** Let  $G$  be a connected graph of order  $n$  and suppose that  $k \in \{1, \dots, n\}$ . Show that  $G$  contains a connected subgraph of order  $k$ .

**Problem 5.** Let  $G$  be a graph with  $\delta(G) \geq 2$ . Show that there is a *connected* graph with the same vertex set and the same degree sequence. More precisely, show that there is a connected graph  $H$  with  $V(H) = V(G)$  such that  $\deg_G(v) = \deg_H(v)$  for all  $v \in V(G)$ .

**Problem 6.** Let  $d_1, \dots, d_n$  be positive integers. Prove that there exists a tree with degrees  $d_1, \dots, d_n$  if and only if

$$d_1 + \dots + d_n = 2n - 2.$$

**Problem 7.** Prove that every graph  $G$  contains each tree with  $\delta(G)$  edges as a subgraph.

**Problem 8.** Compute the number of spanning trees of the complete bipartite graph  $K_{m,n}$ .

---

**Please do NOT submit written solutions to the following exercises:**

**Exercise 1.** Show that every graph with at least two vertices has two vertices of equal degree.

**Exercise 2.** Show that every tree with maximum degree  $\Delta \geq 1$  has at least  $\Delta$  leaves.

**Exercise 3.** Show that a graph is bipartite if and only if it contains no odd cycles. In particular, all trees are bipartite.
