3D Geometric Primitives

This is a pipelined sequence of operations to draw a 3D primitive into a 2D image

Vertex and Fragment Processing

An example thro' the pipeline...

The scene we are trying to represent:

Model Transformations

Perspective Projection

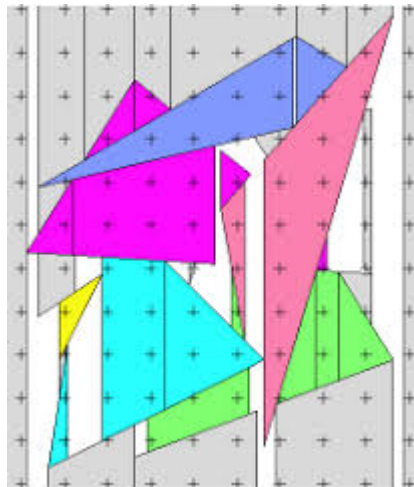

Hidden Surface Removal

Objects occluded by other objects must not be drawn

Hidden Surface Removal

Shading : Constant Shading - Ambient

Objects colours by its own colour

point light source

Shading – Flat Shading

Gouraud shading, no specular highlights

Lighting calculation per vertex

Specular highlights added

Light perfectly reflected in a mirror-like way

Phong shading

Rasterization

Converts the vertex information output by the geometry pipeline into pixel information needed by the video display

Aliasing: distortion artifacts produced when representing a high-resolution signal at a lower resolution.

Anti-aliasing : technique to remove aliasing

Anti-aliasing

**Aliased polygons
(jagged edges)**

Anti-aliased polygons

Texture mapping
