Advanced topics in data structures:

some bibliography

1. A good general survey on amortized analysis is [6]. analysis.
2. Binomial queues were first introduced in [8] (Another good reference for them is [1]).
3. The algorithm of Cheriton and Tarjan for finding minimum spanning trees appeared in [2].
4. The best reference for Fibonacci heaps and their applications is the original paper by Fredman and Tarjan [3].
5. Stuff on red-black trees can be found in [5].
6. Finger search trees and the algorithm for sorting jordan sequences are described in [7, 4].
