

# Graph Theory

## Homework assignment #2

Due date: Sunday, December 11, 2016

**Problem 1.** Prove that every two paths of maximum length in a connected graph must have a vertex in common.

**Problem 2.** Prove that every connected graph has a vertex that is not a cutvertex.

**Problem 3.** Prove that a graph is 2-connected if and only if for any three vertices  $x$ ,  $y$ , and  $z$ , there is a path from  $x$  to  $z$  that passes through  $y$ .

**Problem 4.** Prove that a regular bipartite graph of degree at least 2 does not have a bridge.

**Problem 5.** Show that every  $k$ -connected graph with at least  $2k$  vertices contains a cycle of length at least  $2k$ .

**Problem 6.** Show that if  $\kappa'(G) = k \geq 2$ , then the deletion of  $k$  edges from  $G$  results in a graph with at most 2 components.

**Problem 7.** Let  $G$  be a connected graph with  $n$  vertices. Prove that  $G$  contains a path of length  $\min\{2\delta(G), n - 1\}$ .

**Problem 8.** A *tournament* is a complete graph in which each edge  $uv$  is given a direction, either from  $u$  to  $v$  or from  $v$  to  $u$ . Show that a tournament must contain a Hamiltonian path, that is, a directed path through all the vertices. Must it contain a Hamiltonian cycle?

---

**Please do NOT submit written solutions to the following exercises:**

**Exercise 1.** Show that the block graph of a connected graph is a tree.

**Exercise 2.** Let  $G$  be a graph and let  $A \subseteq V(G)$ . Let  $H$  be the graph obtained from  $G$  by adding to it a new vertex  $v$  with  $N_H(v) = A$ . Show that  $\kappa(H) \geq \min\{|A|, \kappa(G)\}$ .

**Exercise 3.** Prove that  $G$  contains the path of length two as an induced subgraph if and only if  $G$  is not a union of vertex-disjoint complete graphs.
