

$$(X^{cy}, \omega) \leftrightarrow (Y, J)$$

Enumerative closed GW inv. \leftrightarrow Period integrals

homological: $Fuk(X) \cong D^b \text{coh}(Y)$

GPS 15

Extended: Open Gromov-Witten \leftrightarrow "extended period integrals"

$$QH^*(X) := H_{\text{Hodge}}^*(X) \otimes \Lambda_q \text{ novikov-field}$$

$$D_q \frac{d}{dq} (C) = q \frac{d}{dq} (C) + \underbrace{[\omega]}_{PD(\omega)} \star C$$

quantum VHS

+ (filtration)

GPS: $QH^*(X) \rightsquigarrow$ closed Gromov-Witten
 \swarrow OC isomorphism of VHS

$FUK(X) \rightsquigarrow HC_*^-(FUK(X))$ VHS

ST: $QH^*(X, L)$ given $L \subseteq X$
 $= H_* \left(\text{Cone}(\mathbb{Z} \rightarrow C_*(X)) \right) \otimes \mathbb{A}$

$\nabla_{\frac{d}{dq}}(a, \alpha) = \left(\frac{d}{dq}(a), \nabla_{\frac{d}{dq}}(\alpha) + a \cdot \left[\frac{d}{dq} \right]_{L, \text{PK}(a)} \right)$
 VHS.

thm(H.): $QH^*(X, L) \rightsquigarrow$ 1-Point OGW invariants.

$F: * \rightarrow FUK(X)$
 \uparrow
 $*$ $\mapsto L$
 1 $\mapsto e_L$

$HC_*^-(FUK(X), L) = H_* \left(\text{Cone}(F_* : CC_*^-(*) \rightarrow CC_*^-(FUK(X))) \right)$

lemma: can equip this with a VHS.

conj: $\exists \mathcal{O}_{\mathbb{Z}} : \underbrace{HC_*(FUK(X), L)} \rightarrow \mathbb{Q}H^*(X, L)$
 isomorphism of KHS.

thm: (technical assumptions: ^{same as} S.T. to define ogw)

$\exists \mathcal{O}_{\mathbb{Z}} : \underbrace{HC_*(CF^*(L, L), L)} \rightarrow \mathbb{Q}H^*(X, L)$
 morphism of KHS.

assuming conjecture:

$FUK(X) \rightsquigarrow 1\text{-point ogw of } X.$
