Engineering Faculty

Final exam on "Partial Differential Equations"

Lecturer: Prof. Yakov Yakubov

Prescriptions:

1. The duration of the exam is 3 hours.
2. The use of any material is forbidden except the plane calculator and two personal lists (4 pages) of formulas prepared by the student. The size of the lists is the standard A4 format.
3. Do not use any methods which have not been studied in the classes.

The structure of the final exam:

1. There are 5 questions in the exam. You should answer to only 4 questions.
2. The grade of each question is 25 points.
3. Indicate on the first page of the exam which questions should be checked.
4. In the case you solve all 5 questions and you do not indicate which questions should be checked, first 4 questions will be checked.

Good luck!
**Question 1**  (a) (17 points) Solve the following wave (string) problem

\[
\begin{align*}
    u_t &= u_{xx}, \quad x > 0, t > 0 \\
    u(x,0) &= 2x^2 - x, \quad x \geq 0 \\
    u_t(x,0) &= 4x + 1, \quad x \geq 0 \\
    u(0,t) &= 0, \quad t \geq 0
\end{align*}
\]

(b) (8 points) Find the maximum of the solution of the following problem in \([0,1] \times [0,1]\) without solving the problem

\[
\begin{align*}
    u_t - u_{xx} &= -x, \quad 0 < x < 1, \quad t > 0, \\
    u(x,0) &= \frac{1}{2} \sin(\pi x), \quad 0 \leq x \leq 1, \\
    u(0,t) &= 0, \quad u(1,t) = t, \quad t \geq 0
\end{align*}
\]

**Question 2**  (a) (13 points) Classify the equation

\[
u_{xx} + 4u_{xy} + 13u_{yy} + 3u_x + 24u_y - 9u + 9(x+y) = 0
\]

and bring it to the canonical form.

(b) (12 points) Solve the Cauchy problem for the heat equation:

\[
\begin{align*}
    u_t &= a^2 u_{xx}, \quad t > 0, \quad -\infty < x < \infty \\
    u(x,0) &= f(x) = x^2, \quad -\infty < x < \infty.
\end{align*}
\]

**Question 3**  (a) (15 points) Find the solution of the following boundary value problem for the Laplace equation

\[
\begin{align*}
    \Delta u &= 0, \quad x^2 + y^2 < 4, \\
    u(x,y) &= 2xy + 2y^2, \quad x^2 + y^2 = 4
\end{align*}
\]

(b) (10 points) Given the problem

\[
\begin{align*}
    u_t - 3u_{xx} &= \sin(e^t + e^{-t}), \quad 0 < x < \pi / 2, \quad t > 0, \\
    u(x,0) &= e^t + \sin x, \\
    u_x(0,t) &= u_x(\pi / 2,t) = 0.
\end{align*}
\]

Using the energy integral \( E(t) = \frac{1}{2} \int_0^{\pi/2} u^2(x,t)dx \), prove the uniqueness of the solution of the problem.
**Question 4**  (a) (20 points) Solve the Laplace problem in the rectangle

\[
\begin{align*}
& v_{xx} + v_{yy} = 0, \quad 0 < x < 1, \quad 0 < y < 1 \\
& v(0, y) = 0, \quad v(1, y) = y - y^2, \quad 0 \leq y \leq 1 \\
& v(x, 0) = x^2 - x, \quad v(x, 1) = 0, \quad 0 \leq x \leq 1
\end{align*}
\]

(b) (5 points) Find the min/max for the solution of the above problem.

**Question 5**  (25 points) Solve the following non-homogeneous heat problem

\[
\begin{align*}
& u_t = u_{xx} + \sin(\pi x / 2), \quad 0 < x < 2, \quad t > 0, \\
& u(0, t) = 0, \quad u_x(2, t) = 0, \quad t \geq 0, \\
& u(x, 0) = 0, \quad 0 \leq x \leq 2.
\end{align*}
\]
